(2) So verte wide for nex

4.5 Sortresser

$$k_e = \frac{1.13786.10^{-14} \cdot 25}{(70.10^{-6})^2}$$

ke = 5,805,10⁻³ N/m

Det gis at svaraldemation 1) Externmer.

4.6 Så stor er distansen mellom de to platere? Vi har da Km = 5,2.10-4 N/m 0g en bias voltage på 0,3 volt. Xo = 1 pm, V= -2 hm × (x+x0)2 $0,3^2 = (-2.5,2.10^{-4}) \times (x+1.10^{-6})^2$ 8,85.10-12, (0,001.0,001) 7,965.10-19 = x (x2+2.10-6x+10-12) -2.5,2.10-4 x3 + 2.10-6 x2 + 10-12 x + 7,66.10-15=0 x=-0,00000203848 m X =- 2,0 \$ pum X0 + X = 1 pm + 2,04 pm = 3,04 pm er distances mellous dem.

4.7 Vi har formelen $V_p = \frac{2 \times 0}{3} / \frac{1 \times in}{1.5 \cdot (0.)}$ Det behyr da at vi må finne km og Co. $K_{m} = \frac{E_{wt}^{3}}{t^{3}} = \frac{120 \cdot 10^{9} \cdot (10 \cdot 10^{-6}) \cdot (0, 5 \cdot 10^{-6})^{3}}{(300 \cdot 10^{-6})^{3}}$ Km = 1/180 . 2 stotter = \frac{1}{90} N/m V2 = - Rkm×(x+xo) = hvor $C = 8,85.10^{-12}.(400.10^{-6})^{2}$ $2,0.10^{-6} = 7,083.10^{-13}$ $V^{2} = -2 \cdot \frac{1}{40} \cdot (1, 9 \cdot 10, 0) \cdot (1, 9 \cdot 10^{-6})$ 7,0831.10-13 V=-0,232 =7 V= 0,48 vous
